

**Pandit Deendayal Energy University**  
**B. Tech. (Computer Science & Engineering)**

**Course Name: Advanced Web Technology Theory**

**Course Code: 23CP308T; AY-2023-24; Sem-6**

**Total Marks: 20**

**Assignment 2 (React JS)**

1. Implement basic validation within the BookList component to prevent progression to the next step unless a book has been selected by the user [CO5].

### Choose from wide variety of books available in our store

Please choose atleast one book to continue

☐ Zero to One -- Peter Thiel  
☐ Monk who sold his Ferrari -- Robin Sharma  
☐ Wings of Fire -- A.P.J. Abdul Kalam

Submit

**Hint:** Introduce a state to handle validation errors, initially set to false. Upon form submission, evaluate whether the user has not made any selections, updating the error message accordingly. Update the state to reflect the error status and display the appropriate message. If the user has chosen at least one book, reset the error state to false, thus suppressing the error message. Above task should be completed using React concepts.

2. Make the form like below in React with decrement timer [CO3,5].

### Enter your shipping information.

Full Name

Contact number

Shipping Address

Submit

⌚ You have 14 Minutes, 51 Seconds, before confirming order

And print suitable message like below in same form if counter is timed-out. Print the data after clicking on submit button if data is passed in above form within timed-out period.

### Timeout

The cart has timed-out. Please try again!

**Hint:** These React methods/functions can be used here: `componentWillUnmount()`, `setState()`, props etc. Few are listed here, you can use most relevant/suitable React functionalities to make your program effective and simple.

**Instructions for Assignment:**

1. Submit this assignment on or before 20th April, 2024.
2. Contents of assignment should be plagiarism-free.
3. Make pdf with questions, code and output; upload your solution with “studentrollnumber.pdf” in google form provided by Lecture faculties.
